
Texas A&M graduate in mechatronics engineering, focusing on robotics and automation. Over 6 years of experience in various CAD software. Experience in manufacturing, mechanical design, embedded systems, analog electronics and controls.

EDUCATION

TEXAS A&M UNIVERSITY - BACHELOR OF SCIENCE IN MECHATRONICS ENGINEERING (GPA: 3.2)

MAY 2026

Relevant Courses: Static Mechanics, Material Science, Strength of Materials, Metallurgy, Digital Electronics, Embedded Systems, Dynamic Systems and Controls, Power Transmission

EXPERIENCE

BLAST INTERN – BAKER RISK CONSULTING

January 2025 - August 2025

- Worked as part of testing team, responsible for testing and recording hazardous phenomena to develop better understanding of hazards associated with the chemical industry and its processes. Testing included blast tests, structural responses to blasts and hydrogen behavior under extreme conditions.
 - Assisted consulting engineers in creating scientifically robust risk assessments for various client chemical sites.
 - Prepared and deployed over 500 individual pieces of instrumentation, including thermocouples, pressure sensors, heat flux sensors, oxygen sensors, high speed cameras, thermal cameras and security cameras for various process safety tests for clients.
 - Managed test data acquisition and presented results to clients.
 - Provided input into SOP's and other safety documentation and procedures.
 - Developed and built low cost, highly portable, network compatible O2 sensor to measure hydrogen dispersions, saving approximately \$40,000 in testing budget.
 - Worked on internal project that developed and tested new methodology modeling BLEVE blast loads, reducing client costs and improving site study accuracy.
 - Helped host clients at test range and worked to meet their requirements and goals.
 - Designed and built various prototyping projects including pressure gauge mounts and a C4 test jig.
-

PROJECTS

3LB/1LB BATTLE BOTS

- Designed, prototyped, and manufactured a 3lb and 1lb battle bot using parametric CAD.
 - Full custom bot, sporting a vertical spinner and 4-wheel drive
 - Custom armor parts using 3D printed from high performance polymers
 - Custom Electronics setup based on FPV drone
-

SKILLS

- Proficient in C for embedded systems, assembly for embedded systems, Python and C++
- Certification in Auto CAD, Autodesk inventor, and multiple certifications in ONSHAPE
- Instrumentation Experience, including experience with NI suite of products.
- Knowledge of risk management and safety engineering including writing effective SOP's and other safety procedures.
- Basic PCB and Schematic drafting experience.
- Extensive FDM 3-D printing knowledge with materials such as PLA, PET, TPU, ABS, PA ,PC and carbon fiber composites.
- 30-hour General Industry OSHA certification applications
